

Oral Cancer Screening Report

Generated on: February 13, 2026 at 10:13 PM

Patient Demographics

Age:	65
Gender:	Male
Smoking Habit:	Never
Alcohol Consumption:	Moderate (1-7 drinks/week)
Tobacco/Betel Nut Chewing:	Never

AI Model Prediction

Classification:	CANCER
Cancer Probability:	50.18%
Non-Cancer Probability:	49.82%
Confidence:	50.18%

Clinical Risk Assessment & Recommendations

RISK ASSESSMENT

The screening analysis indicates a slightly elevated probability of oral malignancy, warranting further investigation. The patient's age of 65 represents an increased risk factor for oral cancer. Moderate alcohol consumption, while not as significant as heavy use, contributes to the overall risk profile.

CLINICAL RECOMMENDATIONS

- Immediate referral to an oral and maxillofacial surgeon or otolaryngologist for thorough clinical examination and biopsy of any suspicious areas is strongly advised.
- While the patient reports never smoking, continued avoidance of tobacco products in any form is crucial.
- Counsel the patient regarding the synergistic effects of alcohol and other potential risk factors, encouraging a reduction in alcohol consumption.
- Implement regular oral self-examinations and schedule follow-up screening appointments every 6 months to monitor for any changes.

PROFESSIONAL CONSULTATION

This preliminary analysis is intended for informational purposes only and should not be interpreted as a definitive diagnosis. A complete clinical evaluation by a qualified healthcare professional, including physical examination and potentially biopsy, is necessary for accurate assessment and treatment planning. The interpretation of these imaging findings and subsequent management decisions must be made by a licensed medical practitioner.

IMPORTANT DISCLAIMER: This report is generated by an AI system and is intended for screening purposes only. It is NOT a definitive diagnosis. The AI model predictions should be reviewed and validated by qualified healthcare professionals. Please consult with a licensed medical practitioner or oral health specialist for proper diagnosis, treatment recommendations, and medical advice. Early detection and professional evaluation are crucial for oral cancer management.
